

Yamato

Checkweigher ***J*** series

INNOVATION IN MOTION

Checkweigher J series

Evolution of **Yamato** standard model

The J Series checkweigher is an evolution of the already successful I Series range of Yamato weighers. Improved productivity, easy operation and versatility ensure this model is relevant across a wide range of industries.

Industry leading performance

Speed:

480 ppm

max.
45%
up*

Accuracy:

Industry No.1

±0.07g

max.
65%
up*

*Compared to conventional model

Easy operation

- Higher visibility 10.4 inch color touch screen
- Easy initial settings and daily operation
- Controller can be separated from the main body **option**

*Cable max length 10m

Reliability & Safety

- Maintenance information function
- Reject verification function **option**

Industry leading performance

Speeds of 480ppm with an accuracy of $\pm 0.07g$

New load cell

New type high rigid cell shortens the settle time therefore resulting in high speed and high accuracy weighing.

Wide variety of conveyor sizes

A variety of conveyor sizes are available allowing products to be weighed at the maximum speed and accuracy.

Dual load cell (option)

Where floor vibration is an issue, the loadcell can remove low frequency vibration therefore maintaining high accuracy weighing.

Easy operation

10.4 inch color touch screen offers higher visibility and better usability.

Easy initial setting

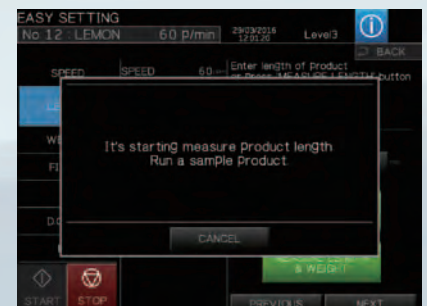

Yamatos 'Automatic program set up' allows initial settings to be performed without any complicated parameters.

Easy initial settings and daily operation

Easy screen control & visibility

A highly visible and clear screen format for ease of operation

Removable Controller (option)

The control unit (screen) can be removed from the main body and located up to 10m away.

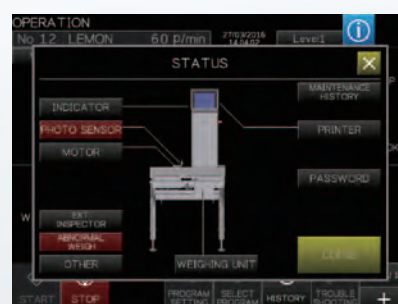

In addition, adjustable angle of controller does not limit operator's working place and improve the work efficiency.

Easy cleaning & maintenance

Error and alert functions

Monitoring errors such as weigh error, photo sensor error, motor error and so on and alert them. Showing the point of the error and how to recover it to minimize the downtime.

Parts replacement alert function

An indicator shows when consumable parts require replacement, this technology can then reduce down time.

High capacity load cell

The loadcell can withstand up to 1000% of its maximum capacity therefore providing greater protection against accidental damage cleaning or maintenance work.

Shorten maintenance time

By unitizing the parts, the maintenance and repair time are shortened.

Tool free maintenance

The conveyor system has minimal components and can be removed and re attached easily and without the use of tools.

Outstanding food safety

J series Checkweigher is HACCP and GMP compliant and provides high level of hygienic safety for wide range of production lines.

Tubular framework

The tubular framework is SUS with an open frame structure which minimizes dust accumulation.

Compliant with food hygiene law

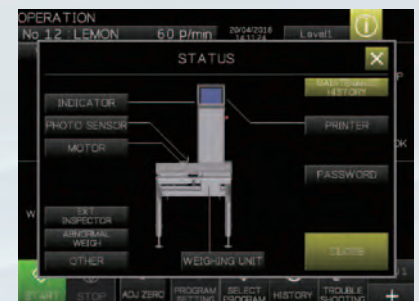

The conveyor belt is fully compliant and meets food hygiene laws.

Reliability & safety

Item Alert

The clear display indicates any areas of concern that needs to be checked prior to daily operation.

Reject verification (option)

By installing sensors at rejecter, it can confirm whether defective products are being properly rejected and prevent those products from being passed on to the next conveyor.

Environmental responsiveness

Eco-Design manufacturing

- The backlight is automatically turned off when the unit is not in operation for a specified period of time.
- The conveyor can also be stopped automatically when the unit is not operated for a period of time in order to save energy.
- Minimizes the environmental impact by reducing the number of components.
- Compliant with RoHS

Overall flexibility

Wide pass line height variation

The line height and overall length of conveyors can be changes to suit your specific factory requirements.

Options

- Reject Device
- Pass line height variations
- Reject verification function
- Signal light
- Tri-colored light
- Buzzer
- Printer
- Dual load cell
- BCD product input
- Feedback
- Automatically conveyors stop function
- Controller can be separated from the main body with cable.
- Wireless LAN function
- Data acquisition software
- Wind cover (main body & rejecter)
- RS232C
- Ethernet
- External indicator
- Conveyor support
- BCD product output
- Transfer plate

Handling capability

Combination Checkweigher and metal detector systems

Slim line and full size units available, checkweigh and metal detect in one process and save on line space.

Features

One-process for metal detection and checkweigher

- Combination solution can reduce the foot print of the machine, and investment and maintenance cost.
- Unified control for program change

High sensitivity

- Utilizing simultaneous 2 frequencies from 4 types allowing higher sensitivity measurements to detect contaminants
- Original digital signal processing allows stable detecting sensitivity.

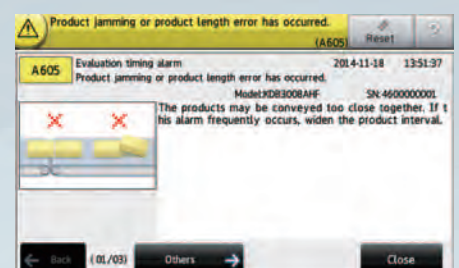

Reliable detecting sensitivity

- self diagnostics through motion monitoring sensor fitted within the head
- Automatic temperature compensation

Ease of operation

- Advanced high-definition color touch screen provides ease of operation and visibility. In addition, new auto-setting algorithm enables easy setup.
- Maintenance support guide indicates the resource of the trouble and how to solve the issue thus reduces downtime.

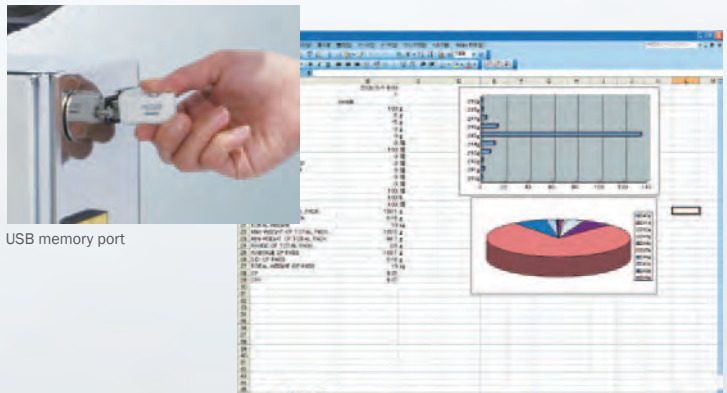

Network Connection Capabilities

The J Series has the ability to network with other devices.

Recording history and data

The operation history and production data is automatically recorded and transferred to a PC or saved to a USB stick. This allows manipulation and interrogation of the data for verification and analysis purposes.

USB memory port

Making use of cumulative production data

Feedback control with Dataweigh Multihead Weigher

Feed back control

When coupled with a Yamato Multihead Weigher, the checkweigher can feed back exact and actual weight so that the Multihead (Dataweigh) can adjust its weighing process. This function results in reduced giveaway and savings in labour costs.

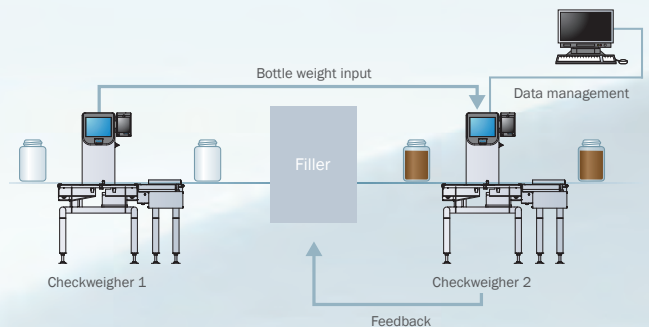

Net Weight Fill Function

Suitable for the case of variable volume bottles

Net weight fill function

Checkweigher one weighs the empty container, then the filler inserts the contents. Checkweigher two weighs the filled container, calculates the net weight and feeds back that net weight to the filler for more accurate feeding.

Yamato & the Checkweigher

In 1966, we introduced the Checkweigher CB3. We have supplied high-performance, robust, and user-friendly Checkweigher Series units for about 50 years now, while building up a global customer base over that time. Our headquarters are located in Akashi, Japan, and we have regional offices in the U.S.A., Canada, Germany, the Netherlands, the U.K., France, Russia, China, India, UAE, Mexico and Thailand. Our worldwide sales network includes representatives in more than 70 countries, and our highly experienced sales and service staff provides customers everywhere with a high level of expertise and service.

Worldwide Sales & Service Network

Yamato is the only manufacturer of multihead weighers with wholly-owned operations in America, Europe and Asia.

Spare Parts & Service

Yamato Spare Parts and Service are subject to the same high demands in quality as the machines themselves.

The listed speed, weight and volume are standard values. Other specifications are also available. Please contact Yamato for details.

This machine is covered by a number of patents worldwide.

All illustrations, specifications, and descriptions are subject to change without notice.
